

TASK 2: EXPLORATORY DATA ANALYSIS (EDA)

1.Introduction

Exploratory Data Analysis (EDA) is performed to understand the structure of data and identify trends, patterns, and anomalies before advanced analysis.

2.Objective

- Analyse overall business performance.
- Identify top-performing products.
- Understand customer purchasing behaviour.
- Evaluate referral source effectiveness.
- Examine revenue trends.

3.Dataset Overview

- Total Records: 1200
- Total Columns: 14

4.Statistical Analysis

Average Order Value

Average Order Value represents the average amount spent per order.

Average Order Value = ₹1053.97

Median Order Value

Median Order Value = ₹823.62

Maximum Order Value

Maximum Order Value = ₹3456.40

5.Product Analysis

Revenue generated by each product was analysed.

Observation:
Chair generated the highest revenue among all products.

Referral Source Analysis

Revenue contribution of referral channels was analysed.

Observation:
Instagram produced the highest revenue among all referral sources.

Revenue Trend Analysis

Revenue trends were analysed monthly and yearly.

Findings:

- Best Year: 2023
- Best Month: June 2024

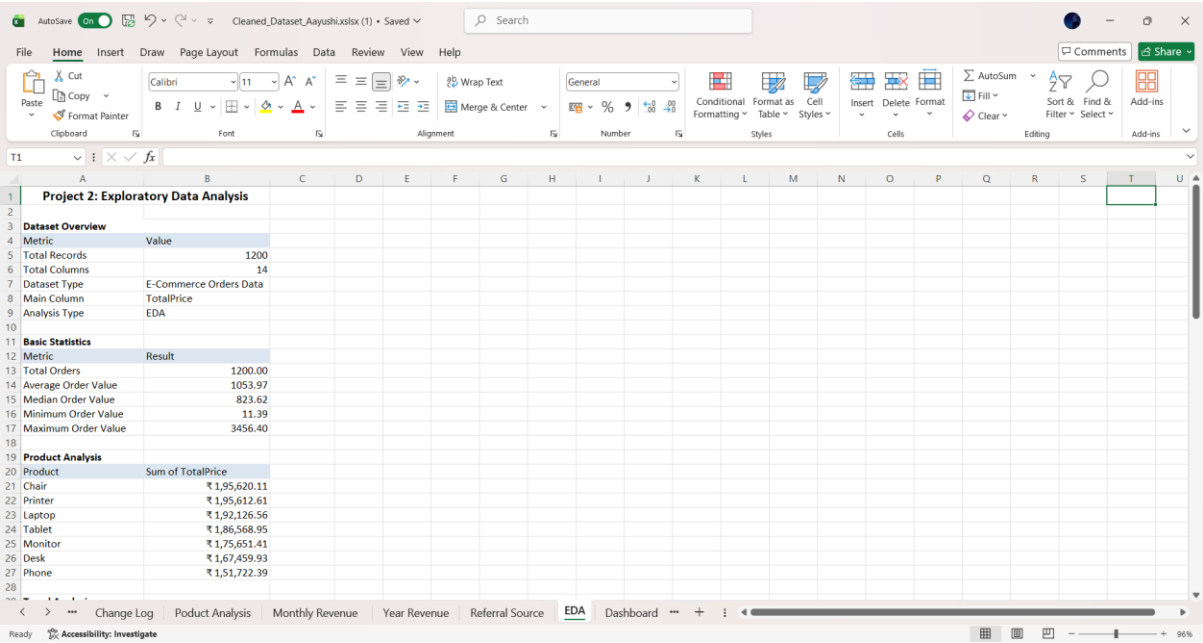

Figure 1: EDA Sheet 1

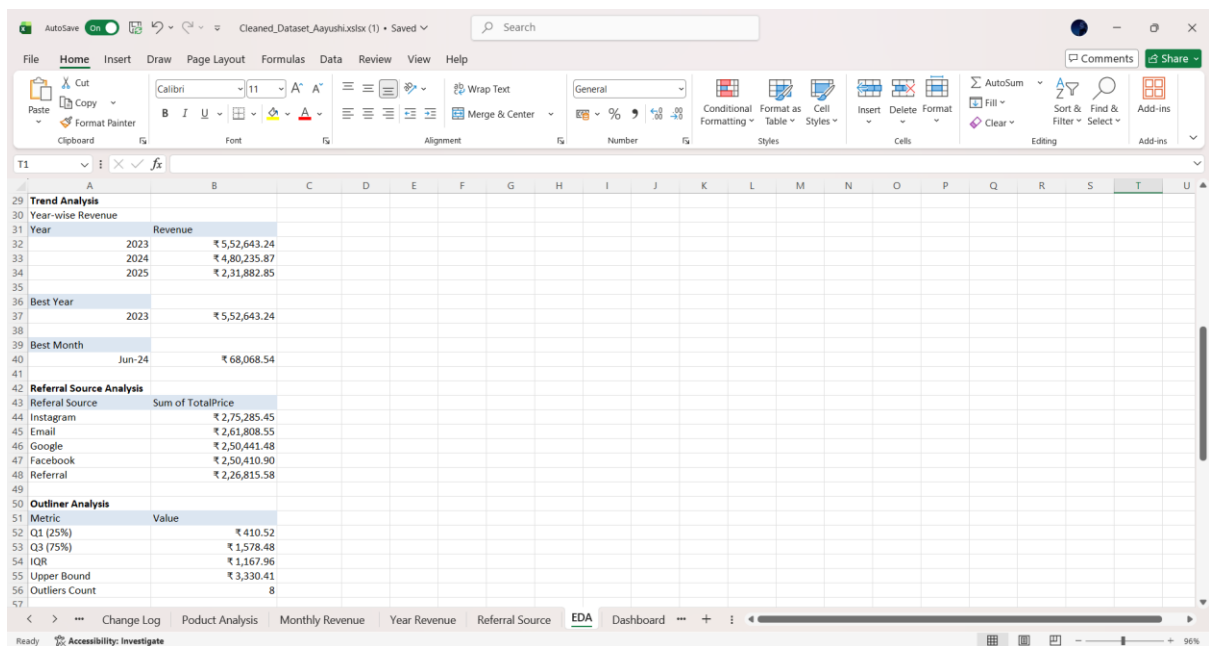

Figure 2: EDA Sheet 2

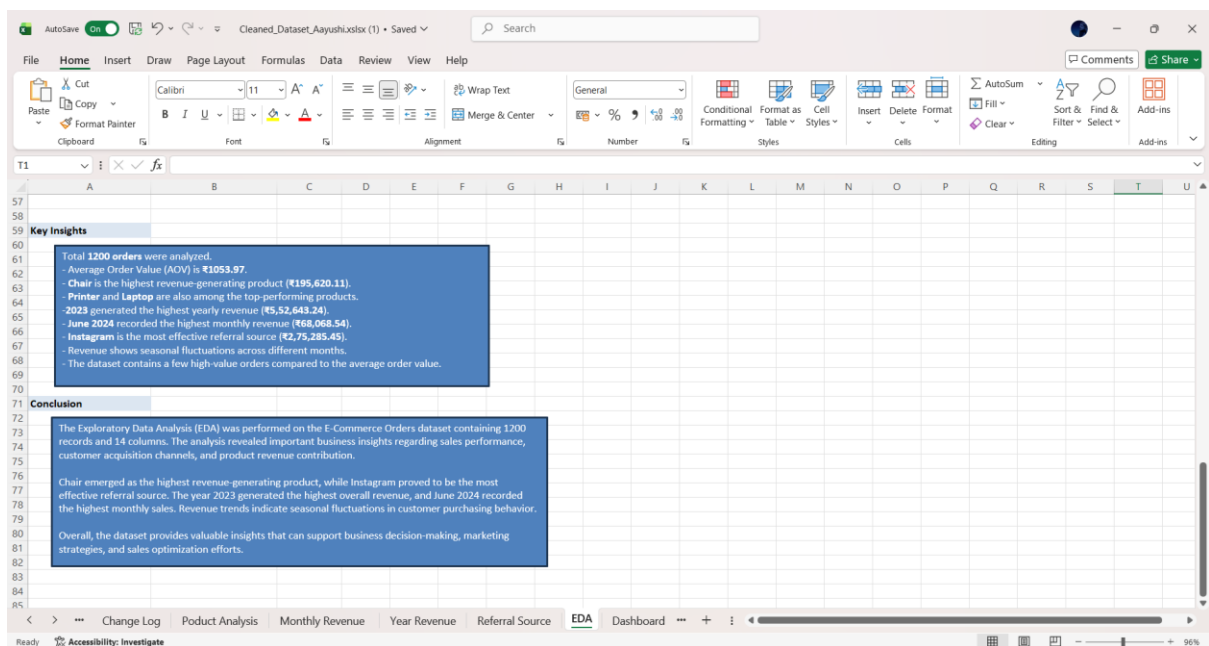

Figure 3: EDA Sheet 3

6.Key Insights

- Product demand varies significantly.
- Social media channels contribute strongly to revenue.
- Revenue patterns indicate seasonal fluctuations.

7.Conclusion

EDA provided meaningful business insights and identified major revenue drivers within the business.
